## Welcome to Dose Check

Inside you will find a letter explaining the benefits of Dose Check and how it helps your facility. Also included are answers to Frequently Asked Questions and "Guidelines for the CT Dose Check Standards" from the American Association of Physicists in Medicine (AAPM). These can also be found at [www.AAPM.org](http://www.AAPM.org).

We ask that you organize a training session for your staff and assign a Dose Check Administrator per the attached training material suggestion. There are two CDs inside to help train your staff on the new Dose Check feature.

The Dose Check Training Video and Training Tutorial provide an overview and step-by-step review of the Dose Check feature. These CDs will help your staff adjust to Dose Check and be aware if and when a Dose Check alert or notification occurs during a scan. Instructions for using the CDs are included inside the CD sleeve.

GE Healthcare plans to release CT Continuum Pack software upgrades with Dose Check on select scanners within these product families: Discovery, LightSpeed, BrightSpeed, Optima and Brivo.

We will provide a training kit to you with each scanner update, so you may receive more than one if you have multiple GE CT scanners. All of the information is the same. Be comforted that the user interface for Dose Check is consistent across all scanners, making for easy adoption by your staff with minimal need to re-train on the Dose Check feature.

In addition to the training material, a Dose Check mouse pad and a Dose Check emblem will be provided for the operator's console to inform your staff that Dose Check has been installed. The Dose Check Quick Guide is provided as well as updated operator manuals for your GE CT system.

Thank you for your cooperation through the installation of Dose Check. We hope you find its benefits useful. Please contact your GE Healthcare representative for any questions or visit us at [www.gehealthcare.com/LowerDoseByDesign](http://www.gehealthcare.com/LowerDoseByDesign).

Sincerely,

Steve Gray
